

ABSTRACT OF THE DISCLOSURE

[00115]

The present disclosure provides systems and methods for automatically controlling updating of computer access settings. Briefly described in architecture, some embodiments of such a system provide computer access settings for a user. One version of a user's computer access settings is stored in a remote database, and another version is stored in the user's computer. Further, a control unit is provided to communicate with a server and to automatically update the versions of the computer access settings in the computer and the server to coincide with each other responsive to at least one computer event. Other systems and methods are also provided.
